D.I.Y Slat Fencing Systems

Q Screen Slats

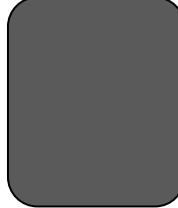

Silver Pearl

Cottage Green

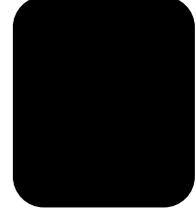

Wilderness

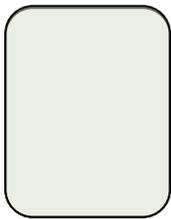

Monument

Woodland Grey

Satin Black

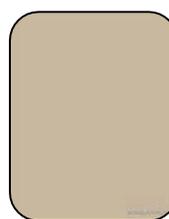

Surfmist

Kwila

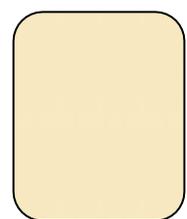

Western red cedar

Paperbark

Stone beige

Primrose

Note: Colours viewed online may vary from actual solid colours

**Professional finish
Slat fencing with quality
Interpon 10 year
Powder coat warranty**

Complete with screws, caps, snap-on screw covers & spacer blocks for 9mm, 15mm and 20mm gaps.

Range of popular colours Plus Western Red Cedar and Kwila timber effect.

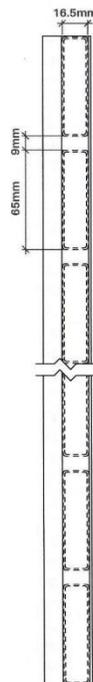

Delivered to you in stock lengths for you to cut to size and fit to your openings.

Note: The 9mm and 20mm spacing chart as shown is a guide only.

As the side frames are an open U Channel you can custom create any panel height with your own chosen gaps.

For Pool Fencing Compliance 10mm maximum gap

9mm spacing example

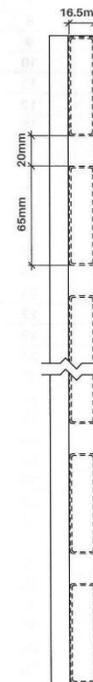

Height	# Blades
290mm	4
364mm	5
438mm	6
512mm	7
586mm	8
660mm	9
734mm	10
808mm	11
882mm	12
956mm	13
1030mm	14
1104mm	15
1178mm	16
1252mm	17

3298mm	39
3383mm	40
3468mm	41
3553mm	42

*All listed heights include 3mm thick top cap

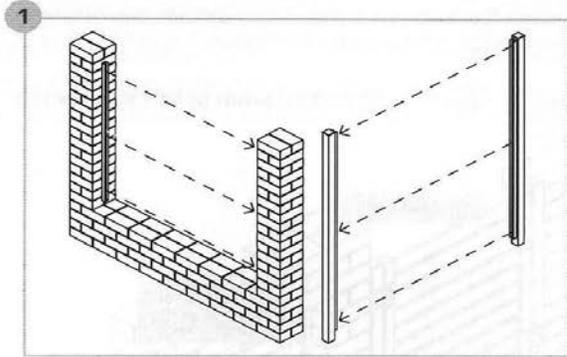

Installation Instructions

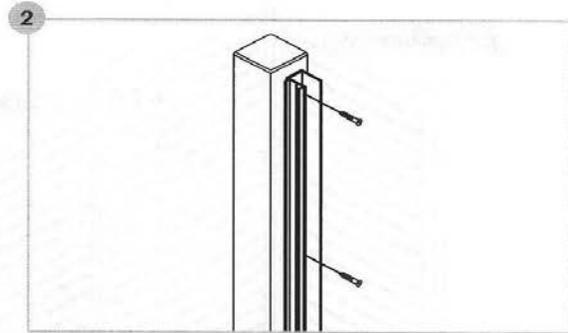

Q Screen

Already cut to size system, or delivered in stock lengths

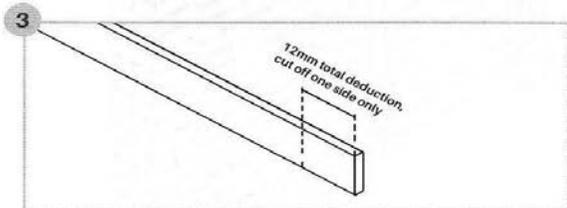

Basic fitting of open topped screen panel

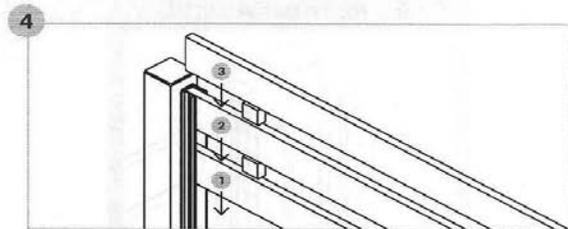

1 Take measurement between walls or posts at 3 points: top, middle and bottom (Take note of the smallest measurement)

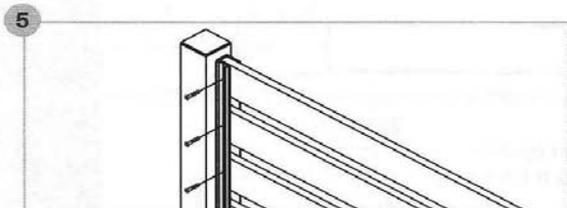

2 Cut side frames 3mm less than desired height (3mm allows for the top cap)
Affix side frames to wall or post with appropriate fixings

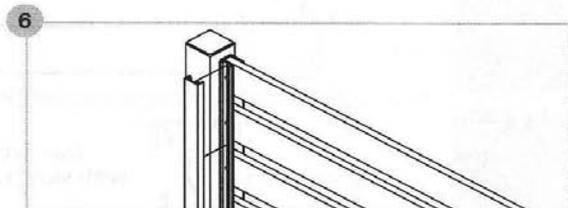

3 Cut aluminium slats 12mm less than total width of opening (Refer to measurement in step 1)
The 12mm deduction takes into account thickness of side frame on both sides of the screen and head of fixings.
Ensure fixings holding side frame do not obstruct slats when dropping in. If so, you may need to trim slats further.

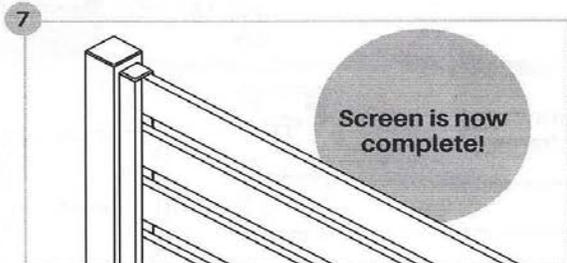

4 Drop in aluminium slats
Tip: Ensure bottom slat is level and screw off at both sides
Optional spacer blocks can be rotated to achieve a 9, 15 or 20mm slat gap. Any gap can be achieved by leaving a desired space. Consider using timber block spacers to achieve other gaps.

5 Screw off each slat as it is dropped in (ensuring each slat is level)
If spacer blocks used, remove after each level is installed.

6 Cut snap on fixing cover to appropriate height
Attach snap on fixing cover to hide screws
Tip: If screen is wider than 1800mm, it is recommended to attach the centre support rail vertically at the centre of the screen. Cut centre support rail to appropriate height of screen and screw off to each slat at back side of screen

Snap on fixing cover install tip

Engage shorter leg of snap-on cover first.

At this point, the snap-on cover will be sitting off the side frame on an angle.

The longer leg must be at open side of side frame.

Starting from the top and working your way down, use a wood block and a hammer/mallet to tap the longer leg into place.

A short, sharp tap may be required to engage the long leg.

These are the two ways of installing side frames, direct to wall/post/void, or with F outer frame.

Note: Factory pre-cut panels will already be cut to allow tolerances required for fitting between post/wall. Fitting allowances only required for customer installation when cutting down stock lengths.

See fitting allowances for non pre-cut lengths on next section

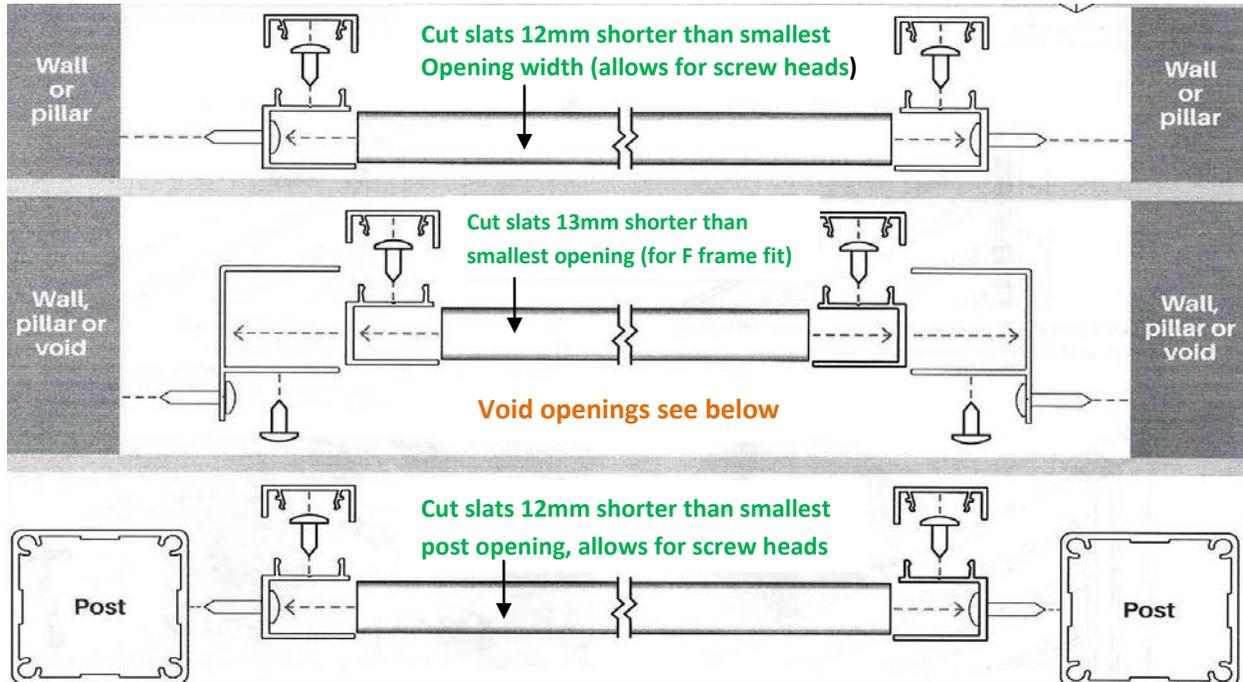

Installation Instructions

Q Screen

Cutting list for customer cutting stock lengths only

(Factory Pre-cut systems already have allowances)

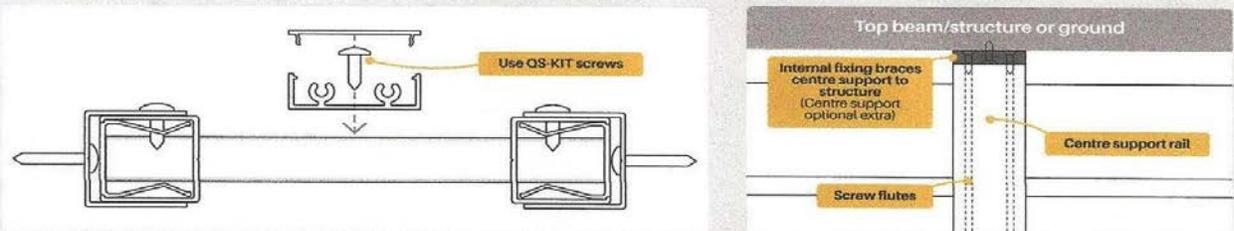

Note: If your opening is completely closed at top (known as a void) your slat framing must be assembled on the ground supported on timber lengths or a soft material to avoid scratching the aluminium sections. For customers' self-cutting stock lengths, measure and cut side U channels and outer F sections at 3mm less than your actual opening height to allow for nylon top caps. To obtain your slat widths take the smallest width measurement of your opening and reduce by **13mm**. This will allow you to fit your slats the full way into the U channels with no gap. This should end up when fully assembled and screwed with the outside measurement of the U channels at **7mm** less than your opening measurement. This will allow the F sections to slip over the U channels with a small amount of movement for adjustment. Large panels will need two men to lift and position. Put two screws each side in bottom, middle and top slats to stabilize panel when lifting. Fit snap on screw cover. Fitting some temporary, plumbed off positioning timber blocks, in your opening will stop the panel from being pushed right through and hold the panel whilst positioning and securing with the F section.

Centre support rail

The centre support rail should be used for slat screening panels wider than 1800mm

Centre support rail is included with all pre-cut panels over 1800mm

Trade tip: Centre support rail can be braced at top and/or bottom with internal fixing (sold separately)
